

EU SEE Dashboard – Executive Quick Start Guide

This document provides a concise overview of how executives can quickly interpret and use the EU SEE Dashboard for high-level decision-making.

1. What the Dashboard Shows

The EU SEE Dashboard consolidates alert-based monitoring data across countries and regions, highlighting trends in negative and positive events, key actors, mechanisms, and geographic patterns.

2. Using the Overview Tab

- Summary cards show total alerts, countries covered, and the balance between negative and positive alerts.
- Stacked bar charts compare alert impacts across types, regions, countries, and enabling principles.
- Use this tab to identify broad trends and emerging hotspots.

3. Negative Events – Strategic Insights

- Focuses exclusively on negative alerts for deeper risk analysis.
- Top-N selector highlights the most frequent actors, mechanisms, and subjects.
- Heatmaps and flow diagrams reveal recurring patterns and relationships.

4. Geographic View (Map)

The map visualizes alert concentration by country. Hovering over a country reveals total alerts, negative vs positive counts, and the share of negative alerts, enabling rapid geographic comparison.

5. Key Questions You Can Answer

- Where are negative events increasing most rapidly?
- Which actors and mechanisms dominate recent alerts?
- Which regions show the highest proportion of negative alerts?
- How are patterns shifting over time?

6. Interpretation Notes

- Alert counts reflect frequency, not severity.
- Top-N views emphasize dominant patterns and may exclude smaller but important cases.
- Use trends over time and cross-visual comparisons for informed decisions.
